OBJECTIVE

AI/ML Engineer with experience building end-to-end AI/ML pipelines, Generative AI applications, and multi-agent systems using Python. Passionate about developing scalable, production-ready AI solutions with MLOps, LLMs, and RAG for real-world engineering applications.

EDUCATION

Bachelor of Technology in Artificial Intelligence and Data Science Jeppiaar Institute of Technology, Kanchipuram, Tamilnadu	2021 – 2025
Bachelor of Science in Data Science and its Applications Indian Institute of Technology - Madras, Chennai, Tamilnadu	2024 – Present <i>Distance Learning</i>

SKILLS

Programming & Machine Learning	Python, SQL, NumPy, Pandas, Scikit-learn, PyTorch, Matplotlib
Generative AI & AI Agents	LangGraph, AutoGen, RAG, MCP, ChromaDB
MLOps & Model Development	MLflow, Docker, CI/CD, LoRA, QLoRA, Hyperparameter Tuning
Computer Vision & Document AI	YOLO, OpenCV, EfficientNet, PyMuPDF
Backend & Web Development	FastAPI, Next.js, React.js (Basics)
Cloud, Databases & Tools	AWS (S3, EC2), Snowflake, SQLite, Git, GitHub

EXPERIENCE

Associate (Data Science) <i>MResult Technologies, Bangalore</i>	Jan 2026 – Present
- Developed an end-to-end agentic AI pipeline using the ReAct framework and LlamaIndex, enabling autonomous reasoning and tool orchestration; deployed the solution on an AWS EC2 instance using FastAPI. - Built ML-powered document intelligence pipelines for document classification and structured information extraction, integrating FastAPI with Snowflake; optimized model accuracy and inference latency through iterative hyperparameter tuning. - Contributed to internal CI/CD workflows and MLflow-based experiment tracking, leveraging AWS S3 presigned URLs for secure artifact storage and ensuring reproducible ML deployments.	
Trainee (Data Science) <i>MResult Technologies, Bangalore</i>	Jul 2025 – Dec 2025
- Engineered a production-ready document processing system using fine-tuned models, achieving 90% accuracy through systematic parameter and inference optimization. - Built multimodal CV workflows for complex document analysis across text, tables, and images, achieving 99% structured extraction accuracy in internal manual testing.	
Data Science Intern <i>MResult Technologies, Bangalore</i>	Feb 2025 – Apr 2025
- Built an end-to-end data pipeline using NumPy and Pandas for data ingestion, cleaning, and transformation, enabling efficient processing of enterprise datasets. - Engineered a multi-agent AI system using AutoGen and ChromaDB to automatically summarize enterprise data and generate structured insights, reducing manual effort by 40%.	

- Built predictive ML models (K-Means clustering and regression) on photon emission datasets, achieving **87% accuracy** in food safety shelf-life estimation; implemented end-to-end pipeline including data cleaning, feature engineering, and model evaluation.

PROJECTS

FinSight AI - Agentic Financial Budget Analyst
GitHub: FinsightAI

Jun 2026 – Present

- Built a **PDF processing pipeline** using **PyMuPDF** to extract and intelligently chunk a **121-page government fiscal document** into 223 section-aware text segments, preserving chapter, section, and page metadata for precise citation
- Developed an automated table extraction system that identifies and structures 42 financial budget tables into a **queryable SQLite database**, enabling SQL-based numeric lookups alongside **semantic text search**
- Building a **multi-agent RAG pipeline** using **LangGraph** with specialized agents for query planning, hybrid retrieval routing, numeric verification against source tables, and an exposable **MCP server** (in progress)

Customer Churn Prediction with MLOps
GitHub: Churn Prediction

Jan 2026 – Mar 2026

- Built a **production-ready ML pipeline** for telecom churn prediction on 7,000+ real-world records – covering automated preprocessing, feature engineering, model training, and batch inference.
- Evaluated multiple classifiers; **Logistic Regression achieved ROC AUC 0.845 and F1 0.61**, demonstrating principled model selection with proper metric-driven comparison.
- Implemented **MLflow** for experiment tracking and model versioning to ensure reproducibility, and designed a modular, container-ready architecture for deployment using **Docker** and **FastAPI**.
