OBJECTIVE

AI/ML Engineer with experience building end-to-end ML pipelines, LLM-powered RAG applications, and multi-agent systems in Python. Focused on shipping production-ready AI with MLOps best practices, from document intelligence to agentic workflows.

EDUCATION

Bachelor of Technology in Artificial Intelligence and Data Science 2021 – 2025
Jeppiaar Institute of Technology, Kanchipuram, Tamilnadu

Bachelor of Science in Data Science and its Applications 2024 – Present
Indian Institute of Technology - Madras, Chennai, Tamilnadu *Distance Learning*

SKILLS

Programming & ML	Python, SQL, NumPy, Pandas, Scikit-learn, PyTorch
Generative AI & Agents	LangGraph, LangChain, LlamaIndex, RAG, MCP, ReAct
Databases	PostgreSQL, pgvector, ChromaDB, Snowflake
MLOps & Model Development	MLflow, Docker, CI/CD, LoRA, QLoRA
Computer Vision	YOLO, OpenCV, EfficientNet
Backend & Cloud	FastAPI, Next.js (basics), AWS (S3, EC2), GCP (Vertex AI), Git

EXPERIENCE

Associate (Data Science) Jan 2026 – Present
MResult Technologies, Bangalore

- Developed **GnA Intelligence Engine**, an **agentic AI** finance and analytics platform using **ReAct** and **LlamaIndex** for autonomous reasoning and tool orchestration; deployed on **AWS EC2** via **FastAPI**.
- Built a **live AI avatar** with **Google Cloud Vertex AI** for a **logistics application**, acting as an interactive product guide that demos the full application and answers questions on any of its features in real time.
- Built **ML-powered document intelligence pipelines** for document classification and structured information extraction, integrating **FastAPI** with **Snowflake**; optimized model accuracy and inference latency through iterative hyperparameter tuning.
- Contributed to internal **CI/CD** workflows and **MLflow**-based experiment tracking, leveraging **AWS S3** presigned URLs for secure artifact storage and ensuring reproducible ML deployments.

Trainee (Data Science) Jul 2025 – Dec 2025
MResult Technologies, Bangalore

- Authored an internal **research white paper** on **VoxAPI**, a secure gateway over third-party LLM providers, benchmarking the impact of **hyperparameters** on output quality using **BLEU**, **ROUGE**, and **BERTScore**.
- Built **multimodal CV workflows** for document analysis across text, tables, and images, **reducing manual effort by around 95%**.

Data Science Intern Feb 2025 – Apr 2025
MResult Technologies, Bangalore

- Built a **NumPy/Pandas** data pipeline for ingestion, cleaning, and transformation of enterprise datasets, and engineered a **multi-agent AI system** with **AutoGen** and **ChromaDB** that auto-summarizes data into structured insights, **reducing manual effort by 40%**.

PROJECTS

FinSight AI - Agentic Financial Budget Analyst Jun 2026 – Present
Live Demo | GitHub *Next.js 14, FastAPI, LangGraph, Neon Postgres, pgvector, MCP*

- Architected a **multi-agent RAG workflow** in **LangGraph** that plans queries, routes between **SQL** lookups and **pgvector** similarity search, and verifies numeric answers against ground-truth tables to curb hallucinations.
- Built a **PyMuPDF** ETL pipeline that turned a **121-page government fiscal white paper** into 223 section-aware chunks and 42 relational tables in **Neon PostgreSQL**.
- Shipped an **MCP server** (4 tools) for Claude Desktop/Cursor, a **dual-LLM failover** layer (Gemini → GPT-4o-mini), and a **Next.js 14** dashboard on Vercel; scored **95.6% precision** on an automated eval suite of **30 benchmark test cases**.

Customer Churn Prediction with MLOps Jan 2026 – Mar 2026
GitHub: Churn Prediction

- Built a **production-ready ML pipeline** for telecom churn prediction on 7,000+ real-world records - covering automated preprocessing, feature engineering, model training, and batch inference.
- Evaluated multiple classifiers; **Logistic Regression achieved ROC AUC 0.845 and F1 0.61**, demonstrating principled model selection with proper metric-driven comparison.
- Implemented **MLflow** for experiment tracking and model versioning to ensure reproducibility, and designed a modular, container-ready architecture for deployment using **Docker** and **FastAPI**.
